Description: Tulips are perennial spring-blooming plants that captivate hearts with their showy, goblet-shaped flowers. They come in a wide range of colors, including red, yellow, pink, purple, and white. Tulips typically have

six petals and grow on sturdy stems, making them popular choices for cut flowers.

Habitat: Tulips are native to Central Asia but are widely cultivated worldwide in temperate regions. They prefer well-drained soil and full sun to partial shade.

Uses: Tulips are primarily grown as ornamental plants in gardens and flower beds. They are also used in floral arrangements and are a popular gift for special occasions.

Interesting fact: Tulips are one of the most popular flowers in the world and are often associated with the Netherlands, where they are a national symbol.

Scientific name: *Rosa*

Family: Rosaceae

Description: Roses are iconic flowering shrubs known for their exquisite beauty and captivating fragrance. They have a wide range of flower forms, from single-petaled to fully double-petaled, and come in an array of colors, including red, pink, yellow, white, and purple. Roses are often prized for their lush foliage and thorny stems.

Habitat: Roses are native to Asia, Europe, North America, and Africa. They prefer well-drained soil and full sun to partial shade.

Uses: Roses are widely cultivated as ornamental plants in gardens, parks, and public spaces. They are also used in floral arrangements, perfumes,

and other fragrance products.

Interesting fact: Roses have been cultivated for centuries and are often associated with love, beauty, and romance.

Scientific name: *Helianthus annuus*

Family: Asteraceae

Description: Sunflowers are towering annual plants that produce massive, cheerful flowers that resemble the sun. They have a central disk filled with tiny florets surrounded by a ring of long, showy ray florets. Sunflowers typically come in shades of yellow, orange, and red.

Habitat: Sunflowers are native to North America but are now widely cultivated worldwide. They prefer well-drained soil and full sun.

Uses: Sunflowers are popular ornamental plants and are also grown for their edible seeds, which are rich in nutrients. Sunflower oil is a valuable cooking oil and is also used in cosmetics and other products.

Interesting fact: Sunflowers are known for their ability to track the sun's movement throughout the day, a phenomenon known as heliotropism.

Scientific name: *Lilium*

Family: Liliaceae

Description: Lilies are stately perennial plants that produce graceful, trumpet-shaped flowers. They come in a wide range of colors, including

white, yellow, pink, orange, and red. Lilies have a long history of cultivation and are prized for their beauty and fragrance.

Habitat: Lilies are native to temperate regions around the world. They prefer well-drained soil and full sun to partial shade.

Uses: Lilies are popular ornamental plants and are also used in floral arrangements and perfumes. Some species of lilies are also used in traditional medicine.

Interesting fact: Lilies are often associated with purity, innocence, and beauty.

Scientific name: Orchidaceae

Family: Orchidaceae

Description: Orchids are a diverse and widespread family of flowering plants known for their extraordinary beauty and intricate flowers. They come in a mind-boggling array of shapes, sizes, and
