Driving Habits

The way you drive has a big impact on your fuel efficiency. Here are some tips for driving more efficiently:

- **Accelerate and brake smoothly.** Avoid jackrabbit starts and hard braking. When you accelerate smoothly, you use less gas. And when

you brake smoothly, you can use your car's momentum to slow down, which also saves gas.

- **Maintain a steady speed.** Once you're up to speed, try to maintain a steady speed. This will help you avoid using more gas than necessary.
- **Use cruise control.** If you're driving on a highway, use cruise control to maintain a steady speed. This can help you save gas, especially if you're driving in hilly terrain.
- **Avoid idling.** If you're going to be stopped for more than a minute or two, turn off your engine. Idling wastes gas.
- **Combine errands.** Instead of making multiple trips, try to combine errands into one trip. This will help you save gas and time.

Car Maintenance

In addition to your driving habits, your car's condition can also affect your fuel efficiency. Here are some tips for maintaining your car for optimal fuel efficiency:

- **Keep your tires properly inflated.** Underinflated tires can increase your rolling resistance, which can lead to decreased fuel efficiency.
- **Get regular tune-ups.** A tune-up can help keep your engine running efficiently, which can lead to improved fuel economy.
- **Change your air filter regularly.** A dirty air filter can restrict airflow to your engine, which can lead to decreased fuel efficiency.
- **Use the correct octane fuel for your car.** Using a higher octane fuel than your car requires can actually decrease fuel efficiency.

- **Consider getting a fuel-efficient car.** If you're in the market for a new car, consider getting a fuel-efficient model. Fuel-efficient cars are designed to get the most miles per gallon possible.

Other Tips

In addition to the tips above, here are a few other things you can do to save money on gas:

- **Walk, bike, or take public transportation whenever possible.** This is the most fuel-efficient way to get around.
- **Carpool with friends or coworkers.** This can help you save on gas and parking costs.
- **Use a gas rewards credit card.** This can help you earn points or cash back on your gas purchases.
- **Shop around for the best gas prices.** Gas prices can vary significantly from station to station. Use a gas price app to find the cheapest gas in your area.

By following these tips, you can hypermile your car and save money on gas. Remember, every little bit helps. Even if you only save a few cents per gallon, it can add up over time. So start hypermiling today and start saving money on gas.
